Servo actuator CASM-25

Miniature electric cylinder with ball screw technology

Compactness

Lightweight

High power density

Ball screw technology

Product description

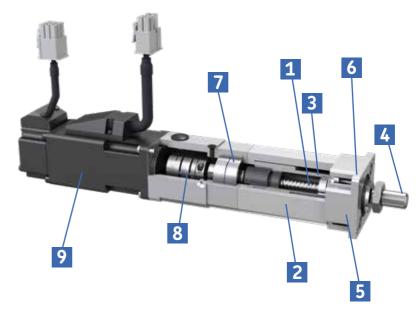

In addition to standard electrical cylinder product range, SKF Motion Technologies offers an extensive customization program that is able to fulfill specific application needs.

The CASM-25 actuator is a customized solution designed for light automation applications and electronic manufacturing industry. This miniature actuator can deliver high static and dynamic force with precise motion and long life in operation.

The SKF Motion Technologies solution is based on a high precision ballscrew SD8x2,5, with a full aluminium body, resulting in a very compact solution with high power density.

Design

- 1 High quality SKF Motion Technologies ball screw
- 2 Aluminium body
- 3 Steel push rod
- 4 Male thread on push rod (customization upon request)
- 5 Front mount
- 6 Scraper on the front to keep out contaminants
- 7 High quality SKF bearings
- 8 Motor adapter with coupling
- 9 Servomotor

Features and benefits

- Compact design: 36x36 mm body section dimension
- High load capacity (Static 2,6 kN, dynamic 300 N)
- High positioning accuracy and repeatability due to precision ball screw
- · High duty cycles
- Virtually maintenance-free
- Push tube with anti-rotation function

- Designed for Automation and Electronics Industry
- Cost effective solution
- · Compatible with any third party motor brand
- Easy installation
- Space saving solution
- Long life in operation

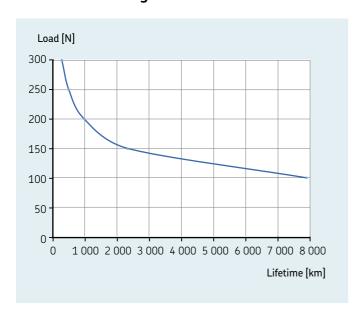

Linear unit

Dimensional drawing

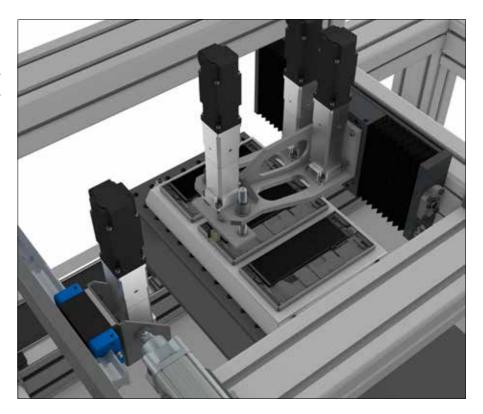

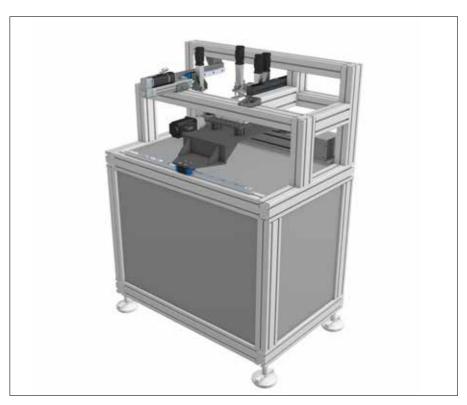

Optimized for your application

Factory automation – Electronics assembly lines

Electronic products like smartphones or monitors are built in fully automatized lines. The complexity of the product requires a reliable process to grant a constant quality of the final product, across the different assembly operations.

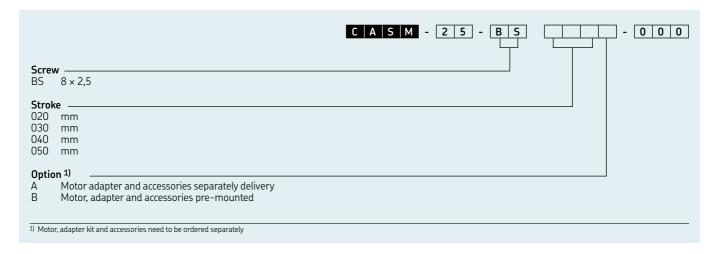

CASM-25 electric cyliders can be used to automatize horizontal or vertical axis on quality inspection stations, normally used in processes like smartphones camera or speaker quality checks. Thanks to their small dimension and precise positioning, they can effectively be used as plug and play positioning capability solutions.
